

Subject line: This Tiny Biotech Stock is Poised to Annihilate Big Pharma

Subject line 2: Imagine a world free of cancer

Subject line 3: This small biotech company can turn \$1,000 into \$76,000

Have you met Paul Mampilly?

He's a former Wall Street insider who's famous for finding and investing in companies on the verge of a medical breakthrough.

His track record is incredible. He consistently makes millions for himself and for his clients.

- In 2006, he was recruited to head up a \$6 billion hedge fund. Under his management the fund's assets soared to \$25 billion.
- Soon after he was invited to take part in a prestigious investment competition to see what I could do with \$50 million. Within a year he was able to make a 76% return.

As impressive that was (he was invited onto CNBC, Fox Business News, and Bloomberg TV), his biggest and quickest gains have been with medical companies. He just has a knack for investing just as they are about to take off.

Here are a couple of quick examples.

- He bought shares in Exact Sciences Corporation (they focus on detecting colorectal cancer early) for less than \$5 a share and sold them for a 355% gain at over \$15 per share.
- He made a 696% gain with Ariad Pharmaceuticals, a company that develops therapies for rare cancers. The shares were \$6 when he bought them and they immediately started to soar.
- He became interested in Sarepta Therapeutics when they just began to develop a new treatment for muscular dystrophy. He invested in 2012, and eight months later pocketed a 2,539% gain!

But those stocks are nothing compared to the company that he's looking at today. He believes that this company can make even bigger gains. And while there are no guarantees when you invest, he believes that you could potentially turn every \$1,000 into \$76,000.

He said, "This company is on the precipice of the biggest medical breakthrough of all time. If it does only half of what I'm expecting, it will make you incredibly wealthy."

This small midwestern company is developing a highly targeted method that could help millions of people live free of diseases like cancer, Alzheimer's, heart disease and many other conditions that take the lives of our loved ones too early.

Paul explains all of it in this video. [link]

P.S. I want to show you the kinds of investments that provide much better returns than the typical investor. That's why I recommend listening to Paul Mampilly's recommendations.

John Dickson followed his advice and said, "The first recommendation of Paul's I bought was back in 2012. I made a 290% gain."

Here's the link to the video.
